

High-Value Counter

No shelves. No POS. Still caught.

AI theft detection for jewellers, watch boutiques & luxury counters · BrainGuardX AI Technologies Pvt. Ltd.

CASE HAND REACH

A hand dips into the display tray, stays, then withdraws. Tracks the actual fingertip — 21-point hand tracking.

GRAB & RUN

A person moves from the display case to the exit door unusually fast — the highest-weighted signal.

TRAY CHANGE

The tray contents visibly drop (an item removed) while a person is at the counter.

FULL CHAIN DEMO

One click replays all three signals in story order — demo the flow live with zero real theft.

Why it's different

- › **One camera, many brains** — hand-reach + tray-change + grab-and-run, plus loitering, fall & queue detection — all at once.
- › **Per-finger precision** — MediaPipe 21-point hand tracking measures the real fingertip entering the tray.
- › **No POS, no shelves, no new cameras** — connects to the Hikvision / Dahua / ONVIF cameras the shop already owns.
- › **Runs on the edge, real-time** — video is analysed on-site; alerts reach the owner's phone in under a second.

One prevented theft pays for the year. Jagajaga Starter is just RM29/month (~ RM348/year) — less than a single lost chain or watch. If it stops one theft, you are already ahead, and it keeps guarding every day after.

See it live in 2 minutes

1. Open the dashboard › High-Value Counter page.
2. Draw the Serving Counter, Display Tray, Display Case and Exit Door on the live snapshot.
3. Save, then go to Demo Center › "Fire High-Value Counter Demo" and watch the alerts land in Incidents.
