

AI Algo Net earnings

1. The Revenue vs. Expense Breakdown for AI Algo Singapore

A. Starter Pack (Published Retail MRP: ₹999 / month)

- **AI Algo Singapore Share (35%): ₹349.65**
- **Total Cloud Expenses per Customer: ₹81.00**
 - *Fixed Costs Share: \$0.17 (VPS, domains, support email boxes)*
 - *Variable Costs Share: \$0.80 (2% Razorpay India gateway fees, OpenAI automated chat support, and Hostinger incident storage)*
 - *Total Cost in INR: \$0.97 × ₹96 = ~₹93.12*
- **Net Profit to AI Algo Singapore: ₹349.65 – ₹93.12 = ₹256.53 per month**
- **Net Profit Margin on Share: 67.8%**

B. Growth Pack (Published Retail MRP: ₹2,499 / month)

- **AI Algo Singapore Share (35%): ₹874.65**
- **Total Cloud Expenses per Customer: ₹100.00** * *Increases slightly due to a higher 2% Razorpay transactional slice (₹50) on the larger bill.*
- **Net Profit to AI Algo Singapore: ₹874.65 – ₹100.00 = ₹774.65 per month**
- **Net Profit Margin on Share: 88.6%**

C. Pro Pack (Published Retail MRP: ₹4,499 / month)

- **AI Algo Singapore Share (35%): ₹1,574.65**
- **Total Cloud Expenses per Customer: ₹150.00**
 - *Accounts for the larger 2% gateway slice (₹90) plus early disk upgrades to accommodate 16-camera streams and 90-day thumbnail retention panels.*
- **Net Profit to AI Algo Singapore: ₹1,574.65 – ₹150.00 = ₹1,424.65 per month**
- **Net Profit Margin on Share: 90.5%**

2. Macro Takeaways for Your Board Presentation

When you review this with your partner in Singapore, emphasize these two massive structural wins:

- **Extremely High Net Margin Floors:** Even after paying 100% of global VPS upgrades, payment gateway percentages, support chat tokens, and domains, AI

Algo Singapore retains an incredible **77% to 90% net profit margin on its incoming revenue.**

- **The Low-Volume Buffer:** Remember, the 35% rate is your absolute floor at Tier 1 volume (25,000+ streams). When your hardware partners are running lower volumes (like Tier 4 or Tier 3), they pay a higher token rate to BrainGuard. BrainGuard still keeps its flat 20% cut, which means the unearned leftover margin automatically defaults back to Singapore. At Tier 4 volume, Singapore's top-line share scales up to **50% of the MRP (₹499.50 on Starter)**, expanding your early-stage cash cushions.

3. Standalone Governance Document

As requested, I have generated a separate, professional compliance blueprint titled **Token Pricing Strategy & Wholesale Sourcing Matrix**. This document outlines how the **35 / 20 / 20 / 25 split** maps out dynamically across your volume-tiered discount frameworks for all three website packages.

You can download, print, or share the complete PDF document directly using the link below: [file-tag: code-generated-file-0-1781070806489344445]

How to Present This Token Sheet to Your Partners:

1. **Show them the Margin Waterfall Alignment:** Walk them through how the pre-paid token structure cleanly ensures that the local installer always walks away with their fixed 25% recurring annuity, which completely handles your field sales momentum.
2. **Highlight the OEM Incentive:** Show Vintron or CP Plus how their corporate purchase price per token drops significantly as they climb from Tier 4 to Tier 1, allowing them to scale up their distribution margins as their active network grows.
3. **Validate BrainGuard's Self-Reliance:** Prove to your Singapore board that leaving 20% within BrainGuard Noida allows the Indian subsidiary to completely self-fund its operations, B2B sales forces, and future domestic cloud data node migrations without draining the parent company.
