

# AI ALGO (S) PTE LTD

## BOARD FINANCIAL ANALYTICS: GLOBAL TIER-MODEL PROFITABILITY REPORT

**Document Purpose:** This quantitative strategic briefing models the net collection yields and exact profit metrics for **AI Algo Singapore** across each volume-tiered channel tranche. All models are directly anchored to the live web-published packages: **Starter (₹1,999)**, **Growth (₹4,499)**, and **Pro (₹8,999)**, adjusted for a verified local operating exchange rate of **1 USD = 96 INR**.

### 1. BASELINE PLATFORM SOURCING COST LOGIC

Vantag maintains high structural software margins due to its **Edge AI Architecture** (all heavy neural network image parsing executes on-site via the client store's computer, generating zero cloud compute fees). The parent company handles 100% of master global cloud infrastructure costs directly from its royalty collections, ensuring that its regional subsidiary, **BrainGuard AI India (Noida)**, remains completely unburdened by global technology bills.

- **Fixed Cloud Base:** Hostinger VPS, support mailbox, and amortized domain renewals = \$17.00 / month \$ ightarrow\$ **₹1,632.00 / month** total master platform base.
- **Variable Cloud Base (Per Tenant / Month):** OpenAI support tokens + compressed thumbnail storage shards = \$0.5917 / tenant \$ ightarrow\$ **₹56.80 / tenant / month**.
- **Gateway Transactional Fees:** Local credit card/payment gateway processing is fixed at **2.0% of gross retail revenue** per transaction tranche.

### 2. CONSOLIDATED COLLECTION AND SHARE MATRIX (PER SUBSCRIPTION / MONTH)

The table below details the top-line cash split across every customer billing event under the approved **35% Singapore Hub / 20% BrainGuard Noida / 20% OEM Partner / 25% Installer Dealer** infrastructure framework:

| PUBLISHED PLAN | LIVE WEB RETAIL PRICE | DEALER CUT (25%) | OEM CUT (20%) | BRAINGUARD NOIDA CUT (20%) | AI ALGO SINGAPORE CUT (35% FLOOR) |
|----------------|-----------------------|------------------|---------------|----------------------------|-----------------------------------|
| Starter Pack   | ₹1,999                | ₹499.75          | ₹399.80       | ₹399.80                    | ₹699.65                           |
| Growth Pack    | ₹4,499                | ₹1,124.75        | ₹899.80       | ₹899.80                    | ₹1,574.65                         |
| Pro Pack       | ₹8,999                | ₹2,249.75        | ₹1,799.80     | ₹1,799.80                  | ₹3,149.65                         |

### 3. COMPREHENSIVE TIER MODEL ANALYTICS (INDIA NODE PROJECTIONS)

The volume discount tiers operate by lowering the pre-paid token sourcing cost for the Hardware OEM Partner as their active stream counts cross specific milestones. BrainGuard Noida's 20% operational fee remains constant to fund local infrastructure, offices, and sales staffing.

Consequently, any unearned margin from lower performance tranches (Tiers 4 through 2) automatically passes straight up to AI Algo Singapore, multiplying parent company yields during initial expansion phases.

#### A. Tier 4 Analytics: Standard Volume (1 – 999 Active Concurrent Streams)

OEM token sourcing price is locked at 5% margin (₹1,399.30 for Starter). Singapore's share scales to 50% of top-line revenue.

| ACTIVE NETWORK SCALE | GROSS MONTHLY COLLECTIONS | SINGAPORE REVENUE SHARE (50%) | MASTER CLOUD BILLS (INC. 2% GATEWAY) | SINGAPORE NET MONTHLY PROFIT | NET PROFIT MARGIN |
|----------------------|---------------------------|-------------------------------|--------------------------------------|------------------------------|-------------------|
| 100 Streams          | ₹1,99,900                 | ₹99,950.00                    | ₹11,310.00                           | ₹88,640.00                   | 88.68%            |
| 500 Streams          | ₹9,99,500                 | ₹4,99,750.00                  | ₹50,030.00                           | ₹4,49,720.00                 | 89.99%            |

#### B. Tier 3 Analytics: Silver Scaler Volume (1,000 – 4,999 Active Streams)

OEM token sourcing price moves to 10% margin (₹1,299.35 for Starter). Singapore's share sits at 45% of top-line revenue.

| ACTIVE NETWORK SCALE | GROSS MONTHLY COLLECTIONS | SINGAPORE REVENUE SHARE (45%) | MASTER CLOUD BILLS (INC. 2% GATEWAY) | SINGAPORE NET MONTHLY PROFIT | NET PROFIT MARGIN |
|----------------------|---------------------------|-------------------------------|--------------------------------------|------------------------------|-------------------|
| 1,000 Streams        | ₹19,99,000                | ₹8,99,550.00                  | ₹98,432.00                           | ₹8,01,118.00                 | 89.06%            |
| 3,000 Streams        | ₹59,97,000                | ₹26,98,650.00                 | ₹2,92,032.00                         | ₹24,06,618.00                | 89.18%            |

#### C. Tier 1 Analytics: OEM Elite Volume (25,000+ Active Streams — Full Target Integration)

OEM partner achieves maximum 20% margin (₹1,099.45 token cost for Starter). Singapore triggers its baseline 35% software royalty floor.

| ACTIVE NETWORK SCALE     | GROSS MONTHLY COLLECTIONS | SINGAPORE REVENUE SHARE (35%) | MASTER CLOUD BILLS (INC. 2% GATEWAY) | SINGAPORE NET MONTHLY PROFIT | NET PROFIT MARGIN |
|--------------------------|---------------------------|-------------------------------|--------------------------------------|------------------------------|-------------------|
| 25,000 Streams (Starter) | ₹4,99,75,000              | ₹1,74,91,250.00               | ₹28,29,132.00                        | ₹1,46,62,118.00              | 83.83%            |
| 25,000 Streams (Growth)  | ₹11,24,75,000             | ₹3,93,66,250.00               | ₹40,79,132.00                        | ₹3,52,87,118.00              | 89.64%            |

## 4. MULTI-REGION REALIGNMENT & ASEAN CORRIDOR PROJECTIONS

The 35 / 20 / 20 / 25 financial template scales seamlessly across international hubs, maintaining strict pricing alignment with our localized digital storefront catalogs:

- **Malaysia Territory:** Billed locally in MYR (Starter at **MYR 79/mo**, Growth at **MYR 149/mo**). AI Algo Singapore captures a clean 35% core royalty (MYR 27.65 on Starter / MYR 52.15 on Growth) per active channel node. Local server overhead is comfortably handled by the localized partner pool allocations.
- **Singapore Territory (Direct Sales Sandbox):** Billed in SGD (Starter at **SGD 29/mo**, Growth at **SGD 59/mo**). Because direct commercial contracts bypass middle-tier hardware OEM margins, the parent entity captures up to **85% of total local direct inflows**, serving as our premium direct cash sandbox.

## 5. PREMIUM MIDDLE EAST HORIZON (UAE & SAUDI ARABIA VECTOR)

The Gulf Cooperation Council (GCC) geographic zone represents our highest expected ARPU market. Due to strict data residency compliance mandates (such as Dubai's SIRA regulations and Saudi Arabia's NCA guidelines), legacy software platforms that rely on continuous streaming of raw video frames to external public clouds face severe legal and cost boundaries.

**Our Competitive Edge:** Vantag's zero-cloud-cost Edge AI architecture processes footage completely inside the shop computer. Data never leaves the physical building; only lightweight, compressed metadata alerts cross the gateway. This completely de-risks Middle Eastern compliance.

**Board Directive on GCC Pricing:** We will bypass low-tier packages entirely in this zone, establishing premium, high-ARPU baseline plans managed via tier-1 regional system integrators in Dubai and Riyadh:

- **GCC Starter Pack:** Billed at **AED 149 / month**  $\rightarrow$  \*Singapore 35% Core Royalty: \* \*\*AED 52.15 / stream / month\*\*.
- **GCC Growth Pack:** Billed at **AED 299 / month**  $\rightarrow$  \*Singapore 35% Core Royalty: \* \*\*AED 104.65 / stream / month\*\*.
