

AI ALGO(S)

CORPORATE STRATEGY PLAYBOOK & ECOSYSTEM BLUEPRINTS

Document Suite: Strategic Separation Framework, Master Indian MoU, and Global Expansion Roadmap

Parent Developer Entity: AI Algo (S) Pte Ltd, Singapore

Regional Execution Entity: BrainGuard AI Technologies Pvt. Ltd., Noida, India

Classification: Commercial Confidential / Board & Partner Review

Date of Generation: June 2026

DOCUMENT 01: MASTER MEMORANDUM OF UNDERSTANDING FRAMEWORK

REF: BG-OEM-MOU-2026-V1

BETWEEN:

BrainGuard AI Technologies Private Limited, having its corporate and registered operational facility located in Noida, Uttar Pradesh, India (hereinafter referred to as "**BrainGuard AI**"), acting as the authorized localized operational, commercial execution, and distribution subsidiary of **AI Algo (S) Pte Ltd, Singapore** (the absolute Intellectual Property Developer).

AND:

[**INSERT HARDWARE PARTNER NAME**], (e.g., Vintron Informatics Ltd / Aditya Infotech - CP Plus), an engineering, assembly, and sales distribution corporation specializing in physical video surveillance and electronic monitoring systems with corporate facilities across India (hereinafter referred to as the "**Hardware Partner**").

1. BACKGROUND & LEGAL STRUCTURAL DEMARCATION

The Hardware Partner maintains a mature manufacturing, system integration, and commercial dealer network within the Indian subcontinent. BrainGuard AI operates as the commercial pipeline entity executing localization and contract fulfillment for the proprietary AI engine architectures developed by its parent technology group, **AI Algo (S) Pte Ltd**.

Both parties enter this agreement to combine physical surveillance cameras with automated software analytics modules to deliver value-add capabilities to the Indian retail and enterprise surveillance sectors.

2. ALLOCATION OF INTELLECTUAL PROPERTY & TECHNOLOGY IDENTITY

- **Core Ownership:** The Hardware Partner explicitly acknowledges that 100% of the proprietary source codes, convolutional neural network architectures, machine learning models, training datasets, and system designs behind **RetailNazar.com**, **SecureWatch Pro**, **GetOmniVoice.com**, and **SmartLeadsHub.com** remain the exclusive, uncompromised property of **AI Algo (S) Pte Ltd, Singapore**. No asset transfer occurs under this localized execution agreement.
- **Mandatory Brand Taglines:** All outward-facing web user interfaces, mobile client dashboards, automated analytical email summaries, and marketing data collateral distributed under this ecosystem must distinctly carry the prominent trademark signature: "**Powered by AI Algo**" or "**Algo Engines**". No pure white-labeling is authorized except under ring-fenced enterprise exceptions approved directly by the parent board.

3. COMMERCIAL EXECUTION MODEL & PRE-PAID TOKEN ENGINE

To isolate BrainGuard AI from local billing disputes and variable cloud metering, the commercial framework operates strictly via an upfront ****SaaS Token Infrastructure****:

1. **The Token Mechanism:** One (1) Digital SaaS Token activates exactly one (1) video camera stream or tracking node for a period of thirty (30) calendar days on either RetailNazar.com or SecureWatch Pro.
2. **Tranche Sourcing:** The Hardware Partner must purchase token balances in advance quarterly tranches from BrainGuard AI. The wholesale transfer price per token scales strictly downward in accordance with the pre-agreed volume thresholds defined below.

3. **Field Distribution:** The Hardware Partner drops tokens from their corporate wallet into local accounts when their network of dealers installs, boots, and binds cameras at client sites. Tokens auto-expire every 30 days, prompting automated renewal invoices via the dealer system.

4. TIERED PRICING SCHEDULE (WHOLESALE TRANSFER MATRIX)

TIER	ACTIVE MONTHLY STREAM THRESHOLD	WHOLESALE TRANSFER PRICE (INR/ STREAM/MO)	MINIMUM COMMITMENT TRANCHE
Tier 4	1 – 999 active camera streams	₹850	On-demand purchase permitted
Tier 3	1,000 – 4,999 active camera streams	₹600	Quarterly block of 3,000 tokens upfront
Tier 2	5,000 – 24,999 active camera streams	₹450	Quarterly block of 15,000 tokens upfront
Tier 1	25,000+ active camera streams	₹300	Quarterly block of 75,000 tokens upfront

5. OPERATIONAL SEGREGATION & FIELD LIABILITY

BrainGuard AI Obligations

- Maintain local cloud endpoint configurations connecting to core Singapore processing models.
- Provide Tier-3 remote software engineering patches and bug rectifications.
- Deliver co-branded technical training documentation for the partner's pre-sales engineers.

Hardware Partner Obligations

- Handle physical site audits, mounting, cabling, local network configuration, and internet allocation.
- Deliver Tier-1 and Tier-2 helpdesk support directly to retail and enterprise customers.
- Retain 100% legal, compliance, and warranty liability for hardware operations and BIS certifications.

6. NON-EXCLUSIVITY & STRATEGIC PRESERVATION

This agreement is strictly **non-exclusive**. BrainGuard AI retains the unrestricted legal right to engage, negotiate, execute parallel contracts, and license its software token infrastructures to any alternative domestic or global hardware manufacturer, system integrator, or direct enterprise entity within the territory of India and globally.

DOCUMENT 02: GLOBAL CAPITALIZATION & EXPANSION BRIEF

TARGET AUDIENCE: SINGAPORE BOARD & PARTNERS

1. EXECUTIVE SUMMARY & CORE OBJECTIVE

This brief outlines the macro strategy of **AI Algo (S) Pte Ltd, Singapore**, for scaling market penetration while completely insulation our primary Intellectual Property (IP) from local operational, tax, and regional compliance environments. By standardizing our regional corporate architecture, Singapore retains absolute IP sovereignty, acting as a clean tech-export node, while ring-fenced local subsidiaries and channel networks scale global cash flow.

2. CORPORATE ARCHITECTURE & DE-RISKING STRATEGY

To execute multi-region monetization safely, the group maintains a two-tier corporate layout:

- **AI Algo (S) Pte Ltd (Singapore Hub):** Holds 100% ownership of all core models, source repositories, data weights, and cloud architectures. It issues standardized API connectivity and sells bulk digital licenses to regional hubs. It remains completely asset-light and protected from direct domestic operational liabilities.
- **BrainGuard AI Technologies Pvt. Ltd. (Noida Hub):** Operates as our dedicated operational subsidiary for the Indian subcontinent. BrainGuard takes all localized contract liabilities, executes invoicing in INR, and manages local partner interactions. If an Indian enterprise or partner raises a legal claim or experiences local site disruptions, the liability is structurally contained inside the Noida corporate boundary, keeping the Singapore parent balance sheet insulated.

3. DUAL-TRACK MONOPOLIZATION PLAYBOOK (INDIA MATRIX)

Our immediate approach leverages the competitive tension between two major Indian hardware giants, Vintron and CP Plus. By utilizing a uniform, tokenized pricing matrix, we drive massive channel competition without splitting territories:

CHANNEL TARGET	NEGOTIATION PROFILE	STRATEGIC DEPLOYMENT VECTOR
Vintron (Board Level Access)	Agile, nimble manufacturer looking for a strong valuation differentiator. High boardroom alignment.	The Legacy Retrofit Goldmine: Target their active historical camera base with a software-only 'AI Upgrade' bundle. Focus on rapid deployment via Tier 3/2 token tranches.
CP Plus (Management Level Access)	Market volume leader. Prone to corporate arrogance; defensive of their distribution pipe.	High-Volume Yield Optimization: Position our API as an antidote to hardware price competition. Force them into upfront Tier 1 commitments (25,000+ active streams) to unlock rock-bottom wholesale rates.

4. MULTI-REGIONAL ROADMAP: SE ASIA & EAST ASIA FOOTPRINT

Using the Indian subsidiary framework as a validated template, AI Algo Singapore will scale into East and Southeast Asian hubs sequentially via localized distribution partners:

A. Hong Kong (The Enterprise & High-Density Retail Gateway)

- **Target Motion:** Partnering with established regional system integrators managing commercial premium mall portfolios and complex high-density transit nodes.
- **Product Layer Focus:** Deployment of **SecureWatch Pro** for spatial crowd analytics and automated threat/anomaly detection, integrated directly with legacy central video management software (VMS).

B. Vietnam (The Manufacturing Logistics & Smart Factory Wave)

- **Target Motion:** Partnering with industrial zone contractors and international logistics providers currently building out massive smart factories.
- **Product Layer Focus:** Custom AI Solutions leveraging computer vision for assembly line anomaly detection, asset security compliance, and license plate tracking, backed by core API tokens from Singapore.

C. Philippines (The BPO Hub & Distributed Commercial Retail Scale)

- **Target Motion:** Dual engagement across major BPO operations facility networks and hyper-scale metropolitan commercial retail groups.
- **Product Layer Focus:** Direct integration of **RetailNazar.com** for distributed retail operations, and parallel pilot intros for **GetOmniVoice.com** to modernize BPO contact center workflows.

Board Directive: All international expansion locations will utilize the same core rulebook. Local partnerships will remain strictly non-exclusive, software fulfillment will run via upfront token draws, and every single digital interaction will be hardcoded as "**Powered by AI Algo**" to scale our international valuation.

DOCUMENT 03: DOMESTIC EXECUTION & CHANNEL BLUEPRINT

TARGET AUDIENCE: BRAINGUARD AI PARTNERS & NOIDA OPERATIONS

1. OBJECTIVE & OPERATIONAL MANDATE

This operational blueprint outlines the ground execution framework for the leadership and management partners at **BrainGuard AI Technologies Pvt. Ltd., Noida**. The core mandate is to secure mass deployment across the Indian commercial surveillance market, onboard 1,000+ active security dealers, and ensure flawless technical delivery while maintaining clean financial accounting.

2. ENFORCING THE PREPAID TOKEN INFRASTRUCTURE

The Noida operations team must strictly resist any demands from hardware distributors or dealers for "post-paid billing," "payment after collection," or "extended credit windows" for software licenses.

- **Operational Directive:** No camera stream shall be granted a live production cloud configuration until the partner has drawn down a paid token from their prepaid wallet balance.
- **Dealer Dashboard Management:** Noida operations will maintain a centralized cloud portal where Vintron, CP Plus, and individual system integrators track their active streams and token consumption. When a partner's wallet drops below a 15-day projected burn rate, the system automatically triggers automated alerts and holds further activations.

3. MANAGING CHANNEL CONFLICT (VINTRON VS. CP PLUS)

As BrainGuard AI simultaneously interfaces with Vintron's boardroom and CP Plus's corporate sales teams, the potential for field conflict is high. Operations must enforce the following segregation lines:

1. **Data Isolation:** Ensure absolute logical segregation of data within our Amazon Web Services (AWS) / Google Cloud local India data centers. Under no circumstances should any partner's engineers or accounts have visibility into the deployment nodes, store names, or camera totals of their competitors.
2. **Pricing Integrity:** Enforce the tiered pricing framework symmetrically. If CP Plus attempts to extract Tier-1 pricing (₹300/mo) but drops their active volume below 25,000 concurrent streams, operations must automatically step their billings up to the appropriate higher tier in the subsequent tranche. No discretionary discount overwrites are permitted without Singapore board authorization.

4. HIGH-LEVERAGE PARTNER ENABLEMENT TOOLS (NON-CASH MARKETING)

To answer the inevitable channel demand for marketing support and market visibility contributions without draining corporate cash reserves, Noida operations will deploy three automated digital tools:

- **The WhatsApp 10-Minute Retail Audit Bot:** A dedicated, automated backend tool linked to our WhatsApp Business API. Field dealers upload a brief 10-second smartphone panning video of a prospective retail store layout. The bot automatically parses the request and returns a beautiful, co-branded "RetailNazar Insight Report" mock-up within 10 minutes, giving the dealer an immediate, friction-free consultative sales weapon on-site.
- **The Certified Specialist Academy:** An online, self-paced digital training platform. We provide technical certifications to the top 200 high-performance partner engineers. Only certified engineers are authorized to handle Tier-1 on-site software setup, eliminating support overhead for our lean internal engineering team.

- **The Partner Annuity Loyalty Program:** A built-in financial incentive structure. Local dealers receive a 10% to 15% recurring retention fee out of the active monthly token subscription as long as their client remains online and active. This builds immense long-term channel loyalty and insulates BrainGuard from competitor hardware poaching.

5. SUPPORT SLA AND TECHNICAL RING-FENCING

To keep our domestic operational team lean and highly focused on software optimization, a strict boundary must be enforced on customer support requests:

SUPPORT LAYER	ISSUE SCOPE	RESPONSIBLE PARTY
Tier 1 (Field Edge)	Physical camera mounting, power failures, network switch disconnections, local router port blocking, and basic client password resets.	Hardware Partner / Local Installing Dealer (100% Owner)
Tier 2 (Config/OS)	Camera stream connection failure, local edge encoding errors, basic API credential configuration mismatch.	Hardware Partner's Central Helpdesk / BrainGuard Certified Engineers
Tier 3 (Core Tech)	Computer vision model false-positive spikes, cloud pipeline processing latency, database optimization, backend codebase exceptions.	BrainGuard Core DevOps (Escalated to AI Algo Singapore where required)

Operational Summary: BrainGuard AI Noida is a technology delivery vehicle, not a physical hardware support house. Enforce strict adherence to the token wallet system, run the automated sales bot tools aggressively to empower dealers, and keep our core engineering focus locked entirely on software delivery under the banner of **"Powered by AI Algo"**.
