

MQTT DOOR LOCK INTEGRATION

The Instant “Lock ‘Em Out” Feature Explained!

This is one of the **most powerful** features in **Retail Nazar** (and JagaJaga / Vantag).

The moment any of the **12 AI detections** spots a threat — theft, after-hours intrusion, zone violation, staff fraud, etc. — the system doesn’t just send you an alert... **it can automatically lock your shop door in under 2 seconds.**

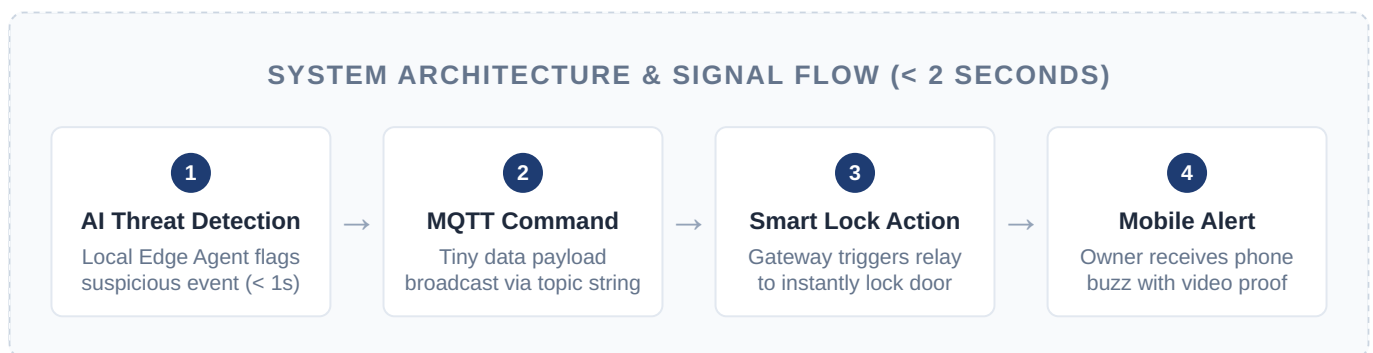

WHAT IS MQTT? (SIMPLE VERSION)

MQTT = Message Queuing Telemetry Transport

It’s the lightweight “messenger” protocol used by millions of smart devices (like smart bulbs, locks, sensors). Think of it as **WhatsApp for machines** — super fast, uses almost no data, works perfectly even on weak networks, and is extremely reliable.

HOW RETAIL NAZAR USES MQTT DOOR LOCK (STEP-BY-STEP)

Here’s exactly what happens in real time:

1. AI Detects Threat

(on your local Edge device — phone, tablet, or mini PC)

Example: Thief is sweeping products into a bag → AI flags “Theft & Concealment” in < 1 second.

2. Instant MQTT Command Sent

The Edge Agent publishes a tiny message to your MQTT broker:

```
topic: retailnazar/door/lock
payload: {"action":"lock", "reason":"theft_detected", "camera":"front_entrance"}
```

3. Your Smart Lock Receives It

Any MQTT-compatible door lock, electromagnetic lock, or even your existing electric strike + MQTT gateway instantly receives the command and **locks the door**.

4. You Get Alert + Proof

At the same moment your phone buzzes with:

“ THEFT DETECTED – Door automatically locked. Watch video →”

Total time: under 2 seconds from detection to door locked.

WHY THIS IS A GAME-CHANGER FOR SHOPKEEPERS

- **Zero delay** — thieves can't run out with your stock
- **Works even if you're not watching** your phone
- **Fully local & private** — command can run completely inside your shop network (no cloud needed)
- **One-tap manual override** — you can also lock/unlock anytime from the Retail Nazar app
- **Works with almost any lock** — most modern smart locks (Tuya, Sonoff, Shelly, or industrial electric strikes) support MQTT

WHAT YOU NEED TO ACTIVATE IT

- One MQTT-compatible smart lock or electric door strike (₹2,000–8,000 range)
- Retail Nazar Edge Agent already running (takes 30 mins total setup)
- 2-minute configuration inside the app — just enter your lock's MQTT topic and credentials

That's it. No coding. No extra monthly fees.

Real Retail Nazar Magic

Traditional CCTV = records the crime.

Retail Nazar + MQTT = catches the crime **and physically stops the criminal** from leaving.

This single feature has already saved shops lakhs in prevented losses.

Want this working in your shop tomorrow?

- ✓ Start 14-day FREE trial at **retailnazar.com**
- ✓ Setup in 30 minutes
- ✓ Add MQTT door lock in 2 extra minutes

Ready to turn your shop into a smart fortress?

Just say “**Give me the exact MQTT setup guide**” or “**Recommend best budget MQTT locks in India**” and I’ll send you the full step-by-step + product links.
