

#NeverBlink

90-Day Marketing Campaign Kit

Turning passive CCTV into active AI-powered security.
From evidence lockers to real-time guardians — edge AI that alerts in 0.4 seconds.

Retail-Vantag · S\$39/mo · SG/MY

Retail Nazar · ₹1,999/mo · India

Infographic 1: 5 Blind Spots Costing Retailers Thousands

Your CCTV Helps You File an Insurance Claim.
Vantag Helps You Prevent the Theft.

Blind Spot 1: Nobody Is Watching Live

Less than 1% of CCTV footage is ever reviewed. By the time you look, the thief is gone.

Blind Spot 2: Theft Is Faster Than Human Reaction

The average shoplifter needs **13 seconds** to conceal an item. A guard glancing at 8 monitors will miss it.

Blind Spot 3: After-Hours Is a Free-for-All

Without real-time alerts, you discover break-ins when you turn the key at 9 AM.

Blind Spot 4: "Smart" Motion Detection Isn't Smart

A stray cat and a crowbar both trigger "motion detected." One wakes you at 2 AM. The other robs you.

Blind Spot 5: Cloud Analysis = Latency + Privacy Risk

Uploading video to analyse it adds 5–15 seconds. And your footage lives on someone else's server.

The Fix: Edge AI Runs Locally

11 models analysing simultaneously. **0.4-second** alerts. No upload. No leak. No latency.

Retail-Vantag · S\$39/mo

India

Retail Nazar · ₹1,999/mo

No credit card required.

Infographic 2: The ROI of Seeing — A Math Problem

\$S\$1,200 / ₹70,000

Average value of one high-ticket shoplifting incident (electronics, designer goods, pharma).

\$S\$39 / ₹1,999

One month of Vantag Starter. All 11 AI models included.

1 Theft Prevented ÷ 30 Months = **System Pays for Itself**

Secondary Savings

- Reduced guard overtime from false alarms
- Less out-of-stock shrinkage via Empty Shelf alerts
- Lower insurance premiums with active monitoring proof

The only thing more expensive than security is replacing stolen inventory.

Infographic 3: Cloud vs Edge — The Pipeline Difference

Cloud AI Pipeline

Edge AI Pipeline

No upload. No bandwidth cost. No privacy leak.

Post 1: The Witness Problem

I walked past 8 retail stores this morning. Every window had a CCTV sticker. Not a single one had a guard watching the feed.

We call them "security cameras," but most are just witnesses that arrive too late. They record the crime so you can file the report. They do not stop the loss.

Real security is not storage. It is speed. 0.4-second alert speed. Edge-AI speed. The kind that pings your phone before the shoplifter reaches the exit.

If your system cannot tell you what is happening while it is happening, you own an evidence locker, not a security system.

14-day free trial. No card. Comment "GUARD" and we'll send the setup checklist.

Post 2: The 13-Second Rule

The average shoplifter needs 13 seconds to conceal an item. The average store manager reviews CCTV footage the next morning.

By the time you sit down with your coffee and scrub through last night's recordings, the inventory is already on a resale site. Your camera saw it. You didn't.

This is not a staffing problem. It is a systems problem. Human attention fluctuates. Guard shifts end. But edge AI runs at 3 AM, 3 PM, and every second in between.

How many seconds is your current response time? If it is measured in minutes or hours, we should talk.

Post 3: Insurance vs Prevention

Business insurance pays you back after the loss. Prevention pays you by stopping the loss. Which budget feels smarter to you?

One high-ticket shoplifting event in a premium store can exceed S\$1,200 (₹70,000).

One month of Vantag Starter is S\$39 (₹1,999).

If preventing a single theft every 30 months already pays for the entire system, everything after that is pure profit protection.

We equipped a 3-location pharmacy chain with Vantag last quarter. Shrinkage dropped 34% in 60 days. The "cost" of the platform was recovered in Week 2.

Stop filing claims. Start firing alerts. DM "PHARMACY" for the full case study.

Post 4: Your Data Doesn't Need a Passport

If your CCTV sends video to the cloud to "analyse" it, your data just crossed a border you never approved.

Upload. Analyse. Wait. Alert. That pipeline adds 7–15 seconds of latency. It also adds legal complexity, bandwidth costs, and a very real privacy risk.

Vantag runs 11 AI models on a chip inside your store. Your video never leaves the premises. The alert reaches your phone in 0.4 seconds. Not because the cloud is fast, but because the cloud is not involved at all.

That is what "edge" actually means. Not a buzzword. A physical chip, inside your building, doing the work.

Privacy-conscious operators: let us show you how zero-upload security works.

Post 5: The Myth of the Smart Camera

Your Hikvision or Dahua system is not "smart" just because the box says AI. If it cannot distinguish between a stray cat and a crowbar on its own, it is motion detection with marketing.

True AI security distinguishes between:

- Shoplifting behaviour vs. normal browsing
- A fall vs. someone tying a shoelace
- A queue growing vs. a crowd waiting for a bus

It runs 11 distinct models simultaneously and routes alerts to WhatsApp, Slack, or Teams without waking your IT department.

Tired of false alarms at 2 AM? Try a system built for accuracy, not hype. S\$39 / ₹1,999 Starter.

Post 6: The DIY Lie

Enterprise security vendors love the phrase "We'll send a technician." Translation: your store closes for half a day, and you pay for the privilege.

Retailers in Singapore and India are not IT departments. You need a platform that connects to the cameras you already own, auto-discovers the feed, and puts AI bounding boxes on moving objects in under 30 minutes.

One person. One phone. One edge box. That is the entire installation.

We filmed the entire setup. Comment "TIMELAPSE" and we'll share the uncut video.

Post 7: One Dashboard, 11 Brains

I built a single-page cheat sheet explaining what 11 AI models actually do in human language. Here is the summary:

Shoplifting detection. Product sweeps. Queue management. Watchlist matching.

Anomalous dwell time. Empty shelf alerts. Fall detection. Crowd surge. Restricted zone breach. Unattended object. Gender / age analytics.

All running locally. All alerting in 0.4 seconds. All for S\$39 / ₹1,999.

Swipe the carousel for the full breakdown. Save this post for your next security review.

Post 8: The Tampines / Andheri Test

A mid-size electronics retailer in Tampines (SG) / Andheri (IN) installed Vantag on a Tuesday. By Thursday, they had prevented two concealment events before the items reached the exit.

They did not hire new security. They did not replace their cameras. They plugged in one edge box, connected their existing IP feeds, and let the models run.

The ROI was not theoretical. It was Tuesday.

Book a 15-minute demo. We'll show you a live dashboard on real feeds.

Post 9: The Crowd Surge Story

A sudden crowd density spike is not always a sale. Sometimes it is a safety event waiting to happen.

Crowd surge detection is not about surveillance. It is about duty of care. Malls, clinics, and post offices use Vantag's density model to trigger staff response before a situation escalates.

The same camera that prevents theft at midnight keeps your customers safe at noon.

Safety officers and mall operators — DM "SURGE" for the compliance one-pager.

Post 10: The Annual Trap (Conversion)

Monthly SaaS bills quietly murder cash flow. That is why we built an annual plan that rewards commitment.

Pay for 10 months, get 12. That is the Vantag annual deal. It drops your effective monthly rate to S\$32.50 (₹1,666) and locks you out of price increases for a full year.

Plus, annual users get priority access to our new Loss Prevention Analytics dashboard, shipping next quarter.

This offer runs for 14 days. Link below for annual checkout.

Post 11: Myth vs Reality

I asked 50 retail owners what they believed about AI security. These 6 myths came up in almost every conversation.

Myth 1: Too expensive. Myth 2: Need new cameras. Myth 3: Cloud only. Myth 4: Takes weeks. Myth 5: IT team required. Myth 6: Privacy risk. Each one busted with data.

Download the full document above. Share it with your operations manager.

Post 12: The NeverBlink Community

1,000+ stores across Singapore, Malaysia, and India no longer review footage the next morning. They respond in 0.4 seconds.

#NeverBlink is not a slogan. It is a standard. If your cameras blink — if they record but do not alert, if they store but do not guard — they are liabilities.

Join the community. Start your free trial. S\$39. ₹1,999. No card required.

Instagram / TikTok — 12 Reel Caption Sets

Reel 1: The 30-Minute Challenge

On-screen:

"They said AI needs an IT team."

POV: You just outfitted your entire store with active AI security before your tea went cold. 🍵🔒

No technician. No drilling. No 3-day onboarding. Just your existing cameras + Vantag in 30 mins.

If your security system requires more setup time than your WiFi router, it is too complicated.

Link in bio for 14-day free trial.

#RetailSecurity #AICCTV #LossPrevention #RetailTech #Shoplifting #NeverBlink #SmallBusiness #DIYSecurity

Reel 2: 13 Seconds

On-screen:

"He needed 13 seconds. We needed 0.4."

The average concealment takes 13 seconds. Average cloud alert? 8 seconds.

By the time your email arrives, he is already at the bus stop.

Edge AI doesn't wait for the internet. It alerts your WhatsApp while the item is still in his hand.

Tap link in bio to see the live demo.

#Shoplifting #RetailSecurity #EdgeAI #LossPrevention #SmallBusiness #RetailIndia
#RetailSingapore

Reel 3: Cloud vs Edge

On-screen:

"Why send your video on holiday?"

Your CCTV footage does not need a passport.

Most AI security uploads your video to a distant server, waits for analysis, then sends an alert. That journey takes 7–15 seconds.

Vantag / Retail Nazar processes everything on a chip inside your store. Zero upload. Zero delay. Zero privacy leak.

14-day free trial. Link in bio.

#PrivacyFirst #EdgeComputing #DataSecurity #RetailIndia #RetailSingapore #CyberSecurity

Reel 4: Which Alert Is Real?

On-screen:

"Motion detected... by a cat. Again."

A plastic bag and a shoplifter should not trigger the same alert.

If your "smart" camera wakes you up at 3 AM because a lizard crossed the lens, it is not smart. It is motion detection in a tuxedo.

Vantag's 11 models know the difference between a stray cat and a product sweep.

Sleep through the night. Guard through the day.

#FalseAlarm #AICCTV #RetailHumor #SmartSecurity #NeverBlink #TechTok

Reel 5: Setup Timelapse

On-screen:

"00:00 → Unbox. 00:22 → Guarding."

Timelapse of a real Vantag install. One person. One phone. One edge box.

Your security upgrade shouldn't feel like a construction project.

Works with Hikvision, Dahua, Reolink, and any ONVIF IP camera you already own.

Free trial. No card. Link in bio.

#DIYSecurity #RetailSetup #TechTok #SmallBusinessTips #Entrepreneur

Reel 6: Alert Replay — Shoplifting

On-screen:

"SHOPLIFTING DETECTED — Track #09"

Real (redacted) alert replay. Bounding box locks the moment concealment behaviour begins.

Not after the exit. Not after the sale. During.

This is what prevention looks like in 0.4 seconds.

Watch the full demo. Link in bio.

#ShopliftingPrevention #RetailSecurity #AI #LossPrevention #SecurityCamera

Reel 7: Queue Alert

On-screen:

"Queue overflow. Open register 2."

Vantag isn't just theft prevention. It is operational intelligence.

Queue too long? The AI texts your floor manager before the fourth customer starts tapping their foot.

Fewer walkouts. Happier customers. More conversions at checkout.

Try it free. Link in bio.

#QueueManagement #RetailOps #CustomerExperience #AIForRetail #RetailTech

Reel 8: Empty Shelf

On-screen:

"Shelf 4 is empty. Restock now."

You cannot sell what is not on the shelf.

Vantag's empty shelf alert pings your restock team the moment a high-velocity SKU goes bare.

Shrinkage prevention + sales preservation. One alert, two wins.

Link in bio.

#InventoryManagement #RetailOps #OutOfStock #SmartRetail #RetailTips

Reel 9: Fall Detection

On-screen:

"Fall detected. Zone C. 0.4s."

In elder care clinics and high-traffic pharmacies, seconds equal safety.

Pose-estimation AI detects a person-down event instantly. No wearable required. No privacy intrusion.

Because dignity and response time should never be compromises.

Learn more at the link in bio.

#HealthcareSecurity #FallDetection #ElderCare #SafetyFirst #RetailNazar #Vantag

Reel 10: Watchlist Match

On-screen:

"Known shoplifter entered via Gate 3."

Your memory is human. Your database shouldn't be.

Watchlist matching compares faces against known incident reports the moment they enter the frame.

Not facial recognition for the masses. Face recognition for your specific watchlist.

Link in bio for a privacy-first demo.

#Watchlist #SecurityAwareness #RetailCrime #LossPrevention #FacialRecognition

Reel 11: Annual Offer Countdown

On-screen:

"Pay 10 months. Get 12. Offer ends in 48 hours."

Flash upgrade for annual members.

Drop your effective rate to S\$32.50 (₹1,666/mo) and lock in priority access to our new Loss Prevention Analytics dashboard.

Less than 2 days left. Don't let your cameras blink while you wait.

Link in bio.

#LimitedOffer #RetailSecurity #AnnualPlan #NeverBlink #Sale

Reel 12: UGC Customer Victory

On-screen:

"3 thefts stopped. Month 1. Cost: ₹1,999."

Real message from a Retail Nazar user in Pune. 🙏

"I used to check cameras every morning. Now my phone tells me before I even unlock the shop."

Your move, thief.

Start free. Link in bio.
