

1. Who to pitch first (priority order)

Priority	Prospect	Why they say yes fast
1	Independent jewellery shops (gold/silver, single & family-run)	Highest per-item loss; owner is often present and emotionally invested
2	Watch & luxury accessory boutiques	High ticket items, small showcase footprint, try-on culture
3	Premium bags / leather / eyewear stores	Items are small, valuable, and handed across a counter
4	Mobile & electronics showcases	Demo units walk away; display tables are the "tray"
5	Pawn shops & money exchange counters	Cash + high-value items over a service counter

Ideal Customer Profile (ICP): high-value, small-form-factor inventory, served over a counter by staff, existing IP cameras already installed, and shrinkage the owner feels but cannot prove.

2. The 30-second pitch

English:

"Your cameras watch the room but nobody is watching the counter. The moment a hand dips into an open display tray, or someone grabs a piece and heads for the door, your phone should buzz right then, not the next morning. Retail Nazar's High-Value Counter does exactly that: it tracks the hand, finger by finger, and alerts you while the item is still in the shop. No shelves, no POS, no new cameras. Want me to show you in two minutes?"

Hindi (short version):

"Aapke CCTV room dekhte hain, lekin counter par nazar koi nahi rakhta. Jaise hi koi haath tray ke andar daale, ya saaman leke door ki taraf bhaage aapke phone par usi waqt alert aana chahiye, agle din nahi. Retail Nazar ka High-Value Counter yahi karta hai. Shelf nahi chahiye, POS nahi chahiye, naya camera nahi chahiye. Do minute mein dikhaun?"

3. Discovery questions (find the pain first)

1. "How do you currently hand over a piece to a customer tray, case, or across the counter?"
2. "When was the last time something went missing, and when did you actually notice?"
3. "How many people can watch the counter while you're serving another customer?"

4. "If a hand went into the tray today, would you know within 10 seconds?"
5. "Do you have any cameras? Are they IP/network cameras or old analog?"
6. "What does one lost piece cost you not just the price, but the margin you have to sell to recover it?"

The goal: get them to say the counter is the vulnerable spot, and that they find out about losses late.

4. Live demo script (5 minutes, no real theft)

1. **Open the High-Value Counter page** in the dashboard.
2. Draw the zones on the live counter camera:
 - **Serving Counter** the customer-facing surface.
 - **Display Tray** the open tray where pieces are handed over.
 - **Display Case** the glass case.
 - **Exit Door** the door.
 - (Optional) **Approach Corridor** the path to the counter.
3. **Save.**
4. Go to **Demo Center > "Fire High-Value Counter Demo"**.
5. Narrate the three alerts as they land in **Incidents**:
 - **Case Hand Reach** > "the hand went in and withdrew."
 - **Tray Change** > "the tray contents dropped."
 - **Grab & Run** > "fast movement from the case to the exit."
6. Close: *"That alert reached your phone in under a second. Your current CCTV would have shown you this tomorrow."*

Tip: fire the three **individual cards** (Case Hand Reach / Tray Change / Grab & Run) to show each signal separately before the full chain.

5. ROI math (make it concrete)

One prevented theft pays for the year.

Example	Value
One gold chain / watch lost	₹50,000 ₹3,00,000
Retail Nazar Starter	₹1,999 / month (~₹24,000 / year)
Annual plan (10+2 months)	~₹1,666 / month effective

The line that lands: "If this stops one ₹50,000 piece from walking out this year, you're already ₹26,000 ahead and the system keeps guarding every day after that."

Shrinkage frame: typical retail shrinkage is **1.52.5% of turnover**. On a ₹1 crore counter business, that's ₹1.52.5 lakh/year quietly disappearing. Retail Nazar costs a small fraction of that.

6. Objection handling

Objection	Response
"We already have CCTV."	"CCTV is a witness, not a guard. It records the theft so you can file a report. We alert you during the theft, while the piece is still in the shop."
"Jewellery is handed over by staff it's normal."	"Exactly that's why shelf-AI doesn't work for you. We don't alarm every handover; we flag the reach-in + withdraw + tray-change + fast-exit pattern for you to confirm in real time."
"It will give too many false alarms."	"It's a review candidate, not an auto-arrest. You confirm each alert with a tap. And because it tracks fingertips, not just 'someone nearby', the signal is far more specific."
"We have no POS / barcode system."	"You don't need one. Detection is 100% visual counter, tray, case, exit. Nothing to integrate."
"Too expensive."	"One prevented theft pays for the year. Starter is ₹1,999/month less than a single silver chain."
"Installation will be painful."	"No new cameras. We connect to your existing IP cameras, and drawing the zones is point-and-click on the live view 15 minutes."
"Privacy / cloud concerns."	"Video is analysed on-site at the edge. It doesn't need to leave your store."
"We'll think about it."	"Fair. Can I leave you with one number how much your last missing piece cost? I'll call Thursday to show you the live demo on your camera."

7. Talking points / proof points

- **"No shelves. No POS. Still caught."** the whole value prop in six words.
- **Fingertip-level detection** "we track the hand, finger by finger."
- **One camera, many AI functions** the counter camera also runs loitering, restricted-zone, fall, and queue detection at the same time.
- **Real-time** alerts in under a second, on the owner's phone.
- **Works with existing cameras** Hikvision, Dahua, ONVIF.
- **On-device processing** video stays in the store.

8. Pricing tie-in

Plan	Best for	High-Value Counter included
Starter	Single counter shop	(with counter camera)
Growth	Multi-counter / 23 cameras	
Pro / Pro+	Multi-store, jewellery chains	+ priority onboarding

Frame the feature as the reason to upgrade: a jewellery store on Starter gets the counter detection on their existing counter camera the upgrade story is "add more cameras", not "unlock the feature".

9. Do's & don'ts

Do:

- Demo live on their counter camera the "aha" moment is seeing their own

room with polygons drawn on it.

- Speak in loss numbers, not model names.
- Be honest that it's a review-candidate (this builds trust and matches how the product actually works).
- Reference the animated Help Center story + setup diagram as leave-behinds.

Don't:

- Claim it's 100% proof or that it "identifies thieves".
- Say it needs new cameras or a POS.
- Over-promise "zero false alarms" say "specific, and you confirm in a tap".
- Pitch shelf-shoplifting features to a jeweller first pitch the counter.

10. Closing & follow-up

1. End the demo with the **Incidents screen** showing the fired alerts that is the product, not a slide.
2. Ask for **one specific date** to go live on their camera ("Can we turn it on for a 14-day trial starting Monday?").
3. Leave the **setup diagram** (`frontend/web/public/images/faq/high-value-counter-setup.svg`) and the **setup guide** (`docs/07_UserGuides/25_High_Value_Counter_Setup_Guide.md`) as the "what to expect" handout.
4. Follow up within 48 hours with the ROI number they gave you in discovery.

Final word: jewellers don't lose stock off a shelf they lose it at the counter. Sell the counter.
